Global Fund

State, Foreign Operations Appropriations Bill
Department of State
Title III
Funded through Global Health Programs

What is the Global Fund?
The Global Fund is a partnership between governments, civil society, the private sector, and people to collectively fight and end the risk of HIV/AIDS, tuberculosis (TB), and malaria. The Global Fund raises and invests more than $5 billion per year to strengthen health systems and enhance pandemic preparedness in more than 100 countries. The Fund is supported through replenishment cycles, the next beginning in FY2026. Ninety-two percent of resources come from donor governments and 8% from the private sector and foundations.

What do the funds support?

- **Grants** for the prevention and treatment of HIV/AIDS, TB, and malaria; diagnostics; healthcare worker training; and building resilient and sustainable health systems.
- **Tools and services** that enable countries to effectively procure lifesaving medicines and health products and enable health programs to achieve the greatest impact for their investment.

Foreign Aid Delivers

Since the Global Fund was founded in 2002, its programs have saved 59 million lives and cut HIV, TB, and malaria death rates in half. In countries where the Global Fund invests, AIDS-related deaths have been reduced by 72%, TB deaths by 16%, and malaria deaths by 27%. In 2022 alone, the Global Fund provided 245 million people with antiretroviral therapy for HIV, treated 6.7 million people for TB, and distributed 219.7 million mosquito nets to help prevent malaria. In addition, the percentage of people in need of antiretroviral therapy who received it increased from 48% in 2015 to 78% in 2022.

Funding History

Funding levels may not accurately reflect those in the appropriations bills and/or reports due to rounding.
